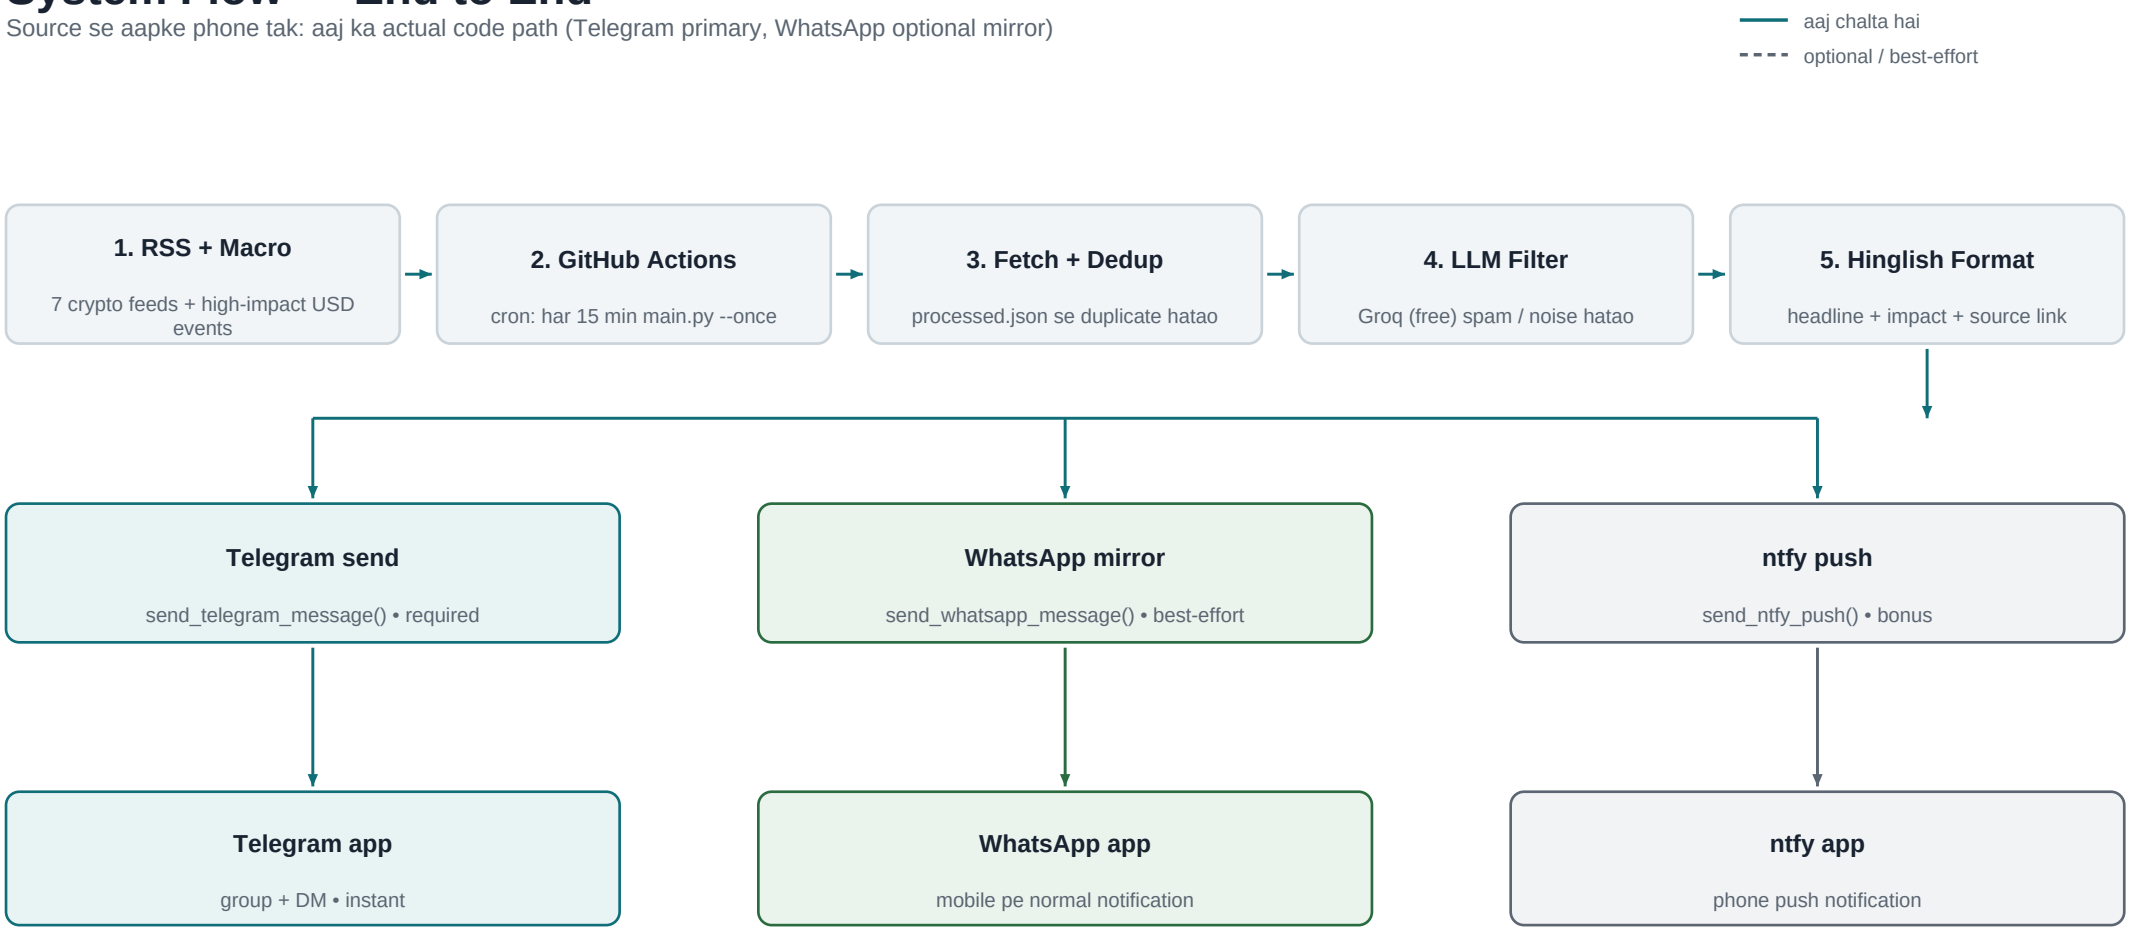
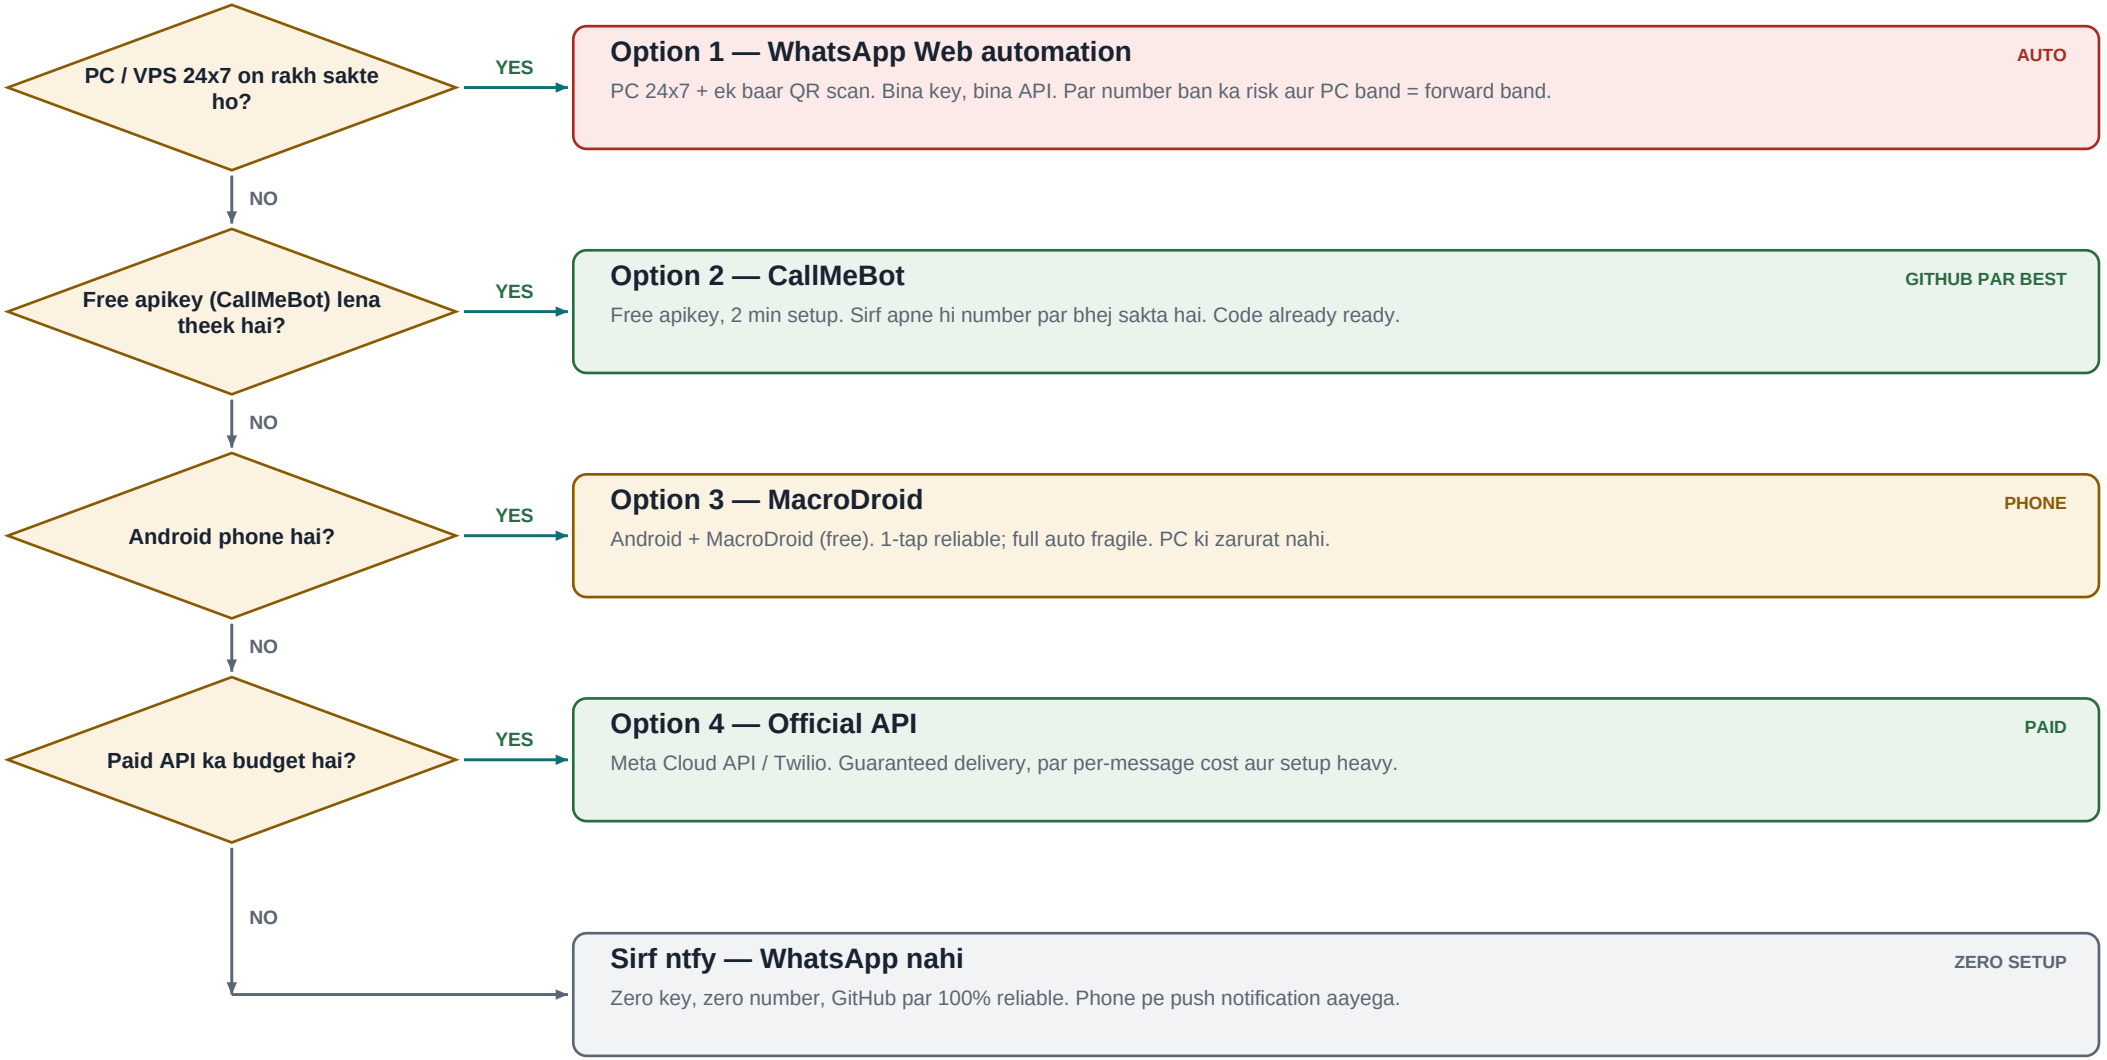
System Flow — End to End

Source se aapke phone tak: aaj ka actual code path (Telegram primary, WhatsApp optional mirror)



Is flow ki 4 zaroori baatein

1.	**Alert kab banta hai**	Sirf jab LLM item ko news-worthy maane. LLM fail hua to item agle cycle me retry hota hai.
2.	**Mirror ka niyam**	WhatsApp aur ntfy tabhi bhejte hain jab Telegram successful ho. Telegram fail = koi mirror nahi.
3.	**Enable kaise**	WHATSAPP_ENABLED=true / NTFY_ENABLED=true. Warna code chalke chup-chaap skip kar deta hai.
4.	**Test karna**	python main.py --test-alert ya GitHub: Actions → Test Alert → Run workflow.

Kaunsa Option Chunein — Decision Flow


Upar se neeche: pehla YES jo mile wahi option. Sab NO = sirf ntfy (WhatsApp nahi).
