WhatsApp Forwarding – BRD

Telegram alerts ko WhatsApp par bhejne ke options, requirements aur risks

21 Oct 2026 | Scope: crypto-news-bot (GitHub Actions) | Status: decision pending

1. Goal

Bot GitHub Actions par chalta hai aur news alerts Telegram par bhejta hai. Wahi alert WhatsApp par bhi chahiye — **bina paid API ke** aur **bina PC 24x7 on rakhe**.

2. Ground truth (ye badal nahi sakta)

WhatsApp par “sirf number daalo aur message chala jaye” aisa koi free official API **exist nahi karta**. Har raaste me inn do me se ek cheez chahiye:
(a) koi **key / token** ya (b) koi **device ya browser** jo message bhejne ke usi second chalu ho.

3. Comparison at a glance

#	Option	Full auto	24x7 device	API key	Cost	GitHub par
1	24x7 system (WhatsApp Web automation)	Haan	Haan, PC/VPS	Nahi	Free	Nahi
2	CallMeBot	Haan	Nahi	Haan, free	Free	Haan
3	MacroDroid (Android phone)	1-tap*	Phone on	Nahi	Free	PC nahi chahiye
4	Official (Meta Cloud API / Twilio)	Haan	Nahi	Haan, paid	Paid	Haan
+	ntfy push (bonus, WhatsApp nahi)	Haan	Nahi	Nahi	Free	Haan

* MacroDroid: reliable version me 1 tap lagta hai; poori automation UI-automation se hoti hai jo WhatsApp update par toot sakti hai.

4. Har option: kya chahiye aur kya dikkat

1 24x7 system — WhatsApp Web automation (Playwright/Baileys)

Sirf tab kaam karega

Requirement: Ek PC / VPS jo 24x7 on rahe. Python + Playwright + Chromium. Ek baar QR scan (WhatsApp Web login), session folder save. Message ke waqt browser chalu hona chahiye.
Dikkat: PC band = forward band. WhatsApp ki ToS ke against hai, number ban ka risk. WhatsApp ka UI update hote hi selector toot jaata hai. GitHub Actions par nahi chalega (runner har run me delete ho jaata hai, IP badalta hai, QR dobara maangega).

2 CallMeBot — free apikey, koi signup nahi

Best on GitHub

Requirement: Apne WhatsApp se CallMeBot number ko exact message bhejo: “I allow callmebot to send me messages”. Reply me free apikey aayegi. Phir .env / GitHub secrets me 4 line. Code already ready hai (main.py).
Dikkat: Sirf **apne hi number** par bhej sakta hai, doosron ko nahi. Bot kabhi “full” rehta hai (number hidden). Unofficial hai, isliye kabhi delay ya down ho sakta hai. Telegram primary rahega, WhatsApp mirror.

3 MacroDroid — Android phone (koi PC nahi, koi key nahi)

Phone chahiye

Requirement: Android phone (already on rehta hai), MacroDroid app (free), notification access. Trigger: Telegram notification aaye. Action: WhatsApp kholo prefilled text ke saath, ya UI-automation se send bhi kar do.
Dikkat: Poori automation fiddly hai — WhatsApp update par toot sakti hai. Reliable version me har message par 1 tap karna padta hai. Phone on + internet chahiye. Battery optimization macro ko band kar sakta hai.

4 Official — Meta WhatsApp Cloud API / Twilio — Guaranteed, paid

Requirement: Meta business app + access token + verified number, ya Twilio account (SID/token/From). Template approval ki zarurat pad sakti hai. .env me provider switch karna hai. Code already ready hai.
Dikkat: Paid hai (per message). Setup heavy. Free-form message sirf 24-hour window me jaata hai, uske baad approved template chahiye. Twilio sandbox 72 ghante inactive raho to dobara join karna padta hai.

+ ntfy push — bonus, WhatsApp nahi — Zero setup

Requirement: Phone me ntfy app install karo, ek secret topic subscribe karo. Bas. NTFY_ENABLED=true + NTFY_TOPIC. Code already ready hai.
Dikkat: Ye WhatsApp message nahi hai — normal push notification hai. Par zero key, zero number, zero 24x7 aur GitHub par 100% reliable. Aaj hi chal jaayega.

5. Recommendation

Aapki condition (GitHub-only + no 24x7 + no paid API) ke andar sirf do option fit hote hain: **Option 2 (CallMeBot)** aur **ntfy**. In dono me se koi bhi “sach me WhatsApp” + bina kisi key + bina device ke nahi chalta — ye combination exist nahi karta.

- **Jaldi chahiye, key nahi chahiye** → ntfy (WhatsApp nahi, push notification).
- **WhatsApp chahiye, GitHub hi rahe** → CallMeBot (free apikey, 2 min).
- **WhatsApp guarantee chahiye, risk zero** → Option 4 (paid).
- **Bina key + bina paid + asli WhatsApp** → Option 1 (PC 24x7) ya Option 3 (phone).

6. Decision required

[ ] Option 2 — CallMeBot enable karein (apikey mil jaye to)
[ ] Option 3 — MacroDroid setup guide banayein (1-tap version)
[ ] Option 1 — WhatsApp Web forwarder banayein (PC 24x7 accept)
[ ] Option 4 — Official API ka budget approve
[ ] ntfy only — WhatsApp abhi chhod dein

Note: Option 2, 3 aur 4 ka sending code pehle se main.py me maujood hai. Kaam sirf config + credentials ka hai.
